Quick Guide

Huntloc

With Huntloc application you can:
- track hunt participants locations, chat and track the hunting dog in real time,
- create your own hunting map.

How to start

1. Download the Huntloc on your smartphone – you can find it in App Store or Google Play by searching „Huntloc".

2. When first using app, you will need to enter your phone number, name, e-mail and your role. Name and role are changeable anytime.

GET IT ON **Google Play**

Download on the **App Store**

10 tips how to use Huntloc:

1. To share hunt with other hunters, create "**Hunt**" (red button) and you will receive unique code.

2. **Share the code** with others and they can join you in your hunt. Everyone who joins the hunt can be seen on the map.

3. To share information and communicate during the Hunt you can use **Chat**.

4. Touching **Map icon** you can choose different map layers on Google and Estonian terrain map.

5. **Long touch on screen** opens up choice, where you can save the location, share it with others or set as your destination to arrive

6. Using **Copmass** you can move where you need to. Mark the destination(long touch on screen) on your map and follow the compass arrow.

7. **Ruler** helps you to measure the distances between the locations

8. On **Menu** you can set the interval how often data is sent and received. Doing so you can save battery for longer

9. To **Track the hunting dog** on you app, you have to have dog tracker.

10. Touch map on your screen and it widens even more!

NB! *Turn on GPS and mobile data on your phone – this way you can see your own and your friends location on your phone and any publicly shared information about the different objects!*
